SUBJECT INDEX

acetylcholine levels - during thyroxine-induced cardiac hypertrophy, 143
acetylcholine - in brain, 293
acetylcholine - release, 53
acetylcholine - synthesis and secretion, 511
acetylcholinesterase - during thyroxine-induced cardiac hypertrophy, 143
acetylcholinesterase - molecular forms, 143
acyltransferases - in brain, 135
adenylate cyclase - effect of SCP_B) , 479
adenylyl cyclase activity - and guanine nucleotide binding proteins, 285
adrenal medullary - chromogranins, 353
β-adrenergic subtypes in development - effect of propranolol, 589
β-adrenergic subtypes - developmental changes, 589
α_{2A}-adrenoceptors, 502
age - variation of poly-phosphoinositide, 11
aging brain - choline acetyltransferase activity, 487
aging rat - monoamine turnover, 531
^{3}H-AMPA - binding, 37
antidepressants - effect on NPY and prepro-NPY-mRNA, 183
arachidonic acid - transfer to phospholipids, 135
arachidonic acid - transfer to triacylglycerols, 135
aromatic amine N-acetyltransferase (NAT) activity - in retinoblastoma (Y-79) cells, 271
arylamine-N-acetyltransferase, 271
arylkylamine - N-acetyltransferase, 271
astrocytes - glutamine used for neuronal GABA, 19
astroglial cells - induction of c-fos and zif/268 mRNA, 567
astroglial - expression of choline acetyltransferase, 511

binding protein - of VIP in pineal, 583
binding proteins - of serotonin, 111
binding - of 5-HT_3 antagonist ^{3}H-GR65630, 547
brain tumors - types of lactate dehydrogenase, 121
brain-specific 14-3-3 protein - homology with puromycin-sensitive aminopeptidase isoenzymes, 445
β-adrenergic subtypes in development - effect of propranolol, 589
β-adrenergic subtypes - developmental changes, 589

calcium influx - in blood platelets, 205
calcium - intracellular levels induced by calcium, 205
calcium - involvement of calcium, 205
calcium/calmodulin-dependent kinase ll, 165
calmodulin binding, 165
calretinin cDNA -nucleotide sequence 541
cAMP linked metabotropic glutamate receptors - in hippocampus, 277
cAMP - metabotropic glutamate receptors, 277
catecholamine binding proteins - in retina, 111
catecholamines - influence of MPTP, 175
catecholamines - neuroimmune modulation, 95
cerebellar soluble lectin - in developing brain, 125
chlorpromazine - effect on phosphatidylserine biosynthesis, 75
cholecystokinin - interaction with serotonergic system, 519
cholecystokinin - release, 519
cholecystokinin - release, 529
choline acetyltranferase - recombinant retrovirus, 511
choline acetyltransferase activity - effect of vitamin E, 487
choline acetyltransferase - activity in aging brain, 487
choline acetyltransferase - activity in brain following AF64A lesions, 487
choline acetyltransferase - expressed in astroglial, 511
choline levels - during thyroxine-induced cardiac hypertrophy, 143
choline metabolites - in rat brain and body fluids, 293

choline - in rat brain and body fluids, 293
cholinergic markers - during hyperthyroidism, 143
cholinergic nerve terminals - release of glutamate and acetylcholine, 53
chromaffin granule proteins - proteases, 361
chromogranins - of the adrenal medullary, 353
chromogranins/secretogranins - posttranslational processing, 315
co-release - of glutamate and acetylcholine, 53
creatine kinase activity - during ontogeny, 405
creatine kinase activity - in development of fish and toads, 405
creatine kinase activity - influence of gravity, 405
cytokines - in neural cell types, 435
cytoskeletal proteins, 165
c-fos mRNA - activated by PAF and ET-18-OCH_3, 567
c-fos mRNA - induced in astroglial cells, 567

D_2-dopamine receptor mRNA - reduced by AF64A, 301
dendrite uptake of dopamine - in weaver mutant mouse, 471
dendrite uptake - of dopamine, 471
detergents - effect on ^{3}H-GR65630 binding, 547
developing brain - of dysmyelinating mutant mice, 125
developmental changes - of brain monoamine metabolism, 589
diacylglycerols - transfer of arachidonic acid to phospholipids, 135
diacylglycerols - transfer of arachidonic acid to triacylglycerols, 135
dihydroxyphenylglycol (DHPG) - formed from released noradrenaline, 493
diisopropyl phosphorofluoridate - role for calmodulin, 165
dipeptidyl peptidase 1 - action on leu-enkephalin, 59
dipeptidyl peptidase 1 - characterisation and purification, 59
4-diphenylacetoxy-N-methylpiperidine methobromide - binding to muscarinic receptors, 237
disulfiram - effect on monoamine oxidase, 31
disulfiram - effect tryptophan and serotonin, 31
dopamine receptor subtypes, 223
dopamine receptors - subtypes, 83
dopamine - dendrite uptake, 471
dopamine - taken up by substantia nigra, 471
dysmyelinating mutant mice, 125

ectophysiological adaptation - gangliosides, 555
enkephalinergic neurones - effect of MPTP, 175
ethanol - effect on phosphatidylserine biosynthesis, 75
ethanol - effect on PKC, 575
ethanol - effect on poly-phosphoinositide metabolism, 11
ethanolamine phospholipids, 45
ethanolamine intermediates - in visual structures, 45
ethylcholine mustard aziridinium (AFB4A) lesions -choline acetyltransferase activity, 487
ethylcholine mustard aziridinium ion lexions - reduce D_2 dopamine receptor mRNA, 301
ethylcholine mustard aziridinium ion (AF64A) - cholinergic neurotoxin, 301

G αimmunoreactivity - in human brain, 285
GÅBA synthesis - from glutamine, 19
GABA transporter mRNA, 263
GABA - release from retina, 249
GABA - released by glutamate, 249
GABA - synthesised from putrescine, 249
gangliosides - ectophysiological adaptations, 557
gangliosides - variability in content and composition in CNS of different species, 555
G_i α-immunoreactivity - in human brain, 285
G_s^1 α-immunoreactivity - in human brain, 285
glutamate receptor agonists - binding, 37
glutamate receptors - metabotropic type, 277
glutamate - induces release of GABA, 249
glutamate - release, 53
glutamine - from astrocytes, 19
glutamine - precursor for GABA synthesis, 19
^{3}H-glycine - binding, 37
glycoprotein ligands - in developing brain, 125
goldfish - influence of γ-vinyl-GABA on neurotransmitters, 197
goldfish - influence of MPTP on neurotransmitters, 197

gravity - effect upon creatine kinase activity, 405
^{3}H-GRG5630 - effect of detergents on binding, 547
guanine nucleotide binding proteins - association with adenyl cyclase acivity, 285
guanine nucleotide binding proteins - in human brain, 285

human brain - different types of dopamine receptors, 83
5-hydroxytryptamine = serotonin
5-HT$_3$ antagonist ^{3}H-GR65630 - binding, 547
hyperthyroidism - cholinergic markers, 143

idazoxan binding - to various nervous tissues, 501
idazoxan - binds to adrenoceptors and non-adrenergic sites, 501
imidazoline preferring receptors, 153
imidazoline - binding sites in human cortex, 153
immune system - interaction with nervous system, 95
inhibitors - of PKC, 421
insulin - cellular and physiological functions, 1
insulin - in the CNS, 1
insulin - receptor, 3
insulin - transport, 2
interferon-γ, 437
interleukins, 436
intracellular calcium - induction by serotonin, 205
intramembrane receptor-receptor interactions, 213
isoenzymes - of lactate dehydrogenase, 121
isoenzymes - of puromycin-sensitive aminopeptidas,445
^{3}H-kainate - binding, 37
kinase dependent phosphorylation of cytoskeletal proteins, 165

lactate dehydrogenase - isoenzymes in brain tumors, 121
lateral geniculate nucleus - monoamine turnover, 531
leu-enkephalin - action of dipeptidyl peptidase I, 59
lipid hydroperoxides, 255
lipid intermediates - in brain, 135
lipid peroxidation , 255
lithium - effect on M$_3$-muscarinic receptors, 395
lithium - induced changes on muscarinic receptor mRNA, 395
lymphocytes, 96
lysophospholipids - transfer of arachidonic acid to phospholipids, 135
lysophospholipids - transfer of arachidonic acid to triacylglycerols, 135

M$_3$-muscarinic receptor - in cultured granular cells, 395
M$_3$-muscarinic receptors - associated with phospholipase C, 395
metabotropic glutamate receptors - inhibition of cAMP, 277
1-methyl-4-phenyl-1,2,3,6-tetrahyropyridine =MPTP
^{3}H-MK801 - binding, 37
monoamine metabolism in development - effect of propranolol, 589
monoamine metabolism - in developing brain, 589
monoamine oxidase activity - effect of disulfiram, 31
monoamine turnover - in aging rat CNS, 531
MPTP - effect on enkephalinergic neurones, 175
MPTP - effect on neurotransmitters, 197
MPTP - influence of catecholinergic system, 175
mRNA - of D$_2$ dopamine receptor, 301
mRNA - of GABA transporter, 263
mRNA - of muscarinic receptors, 395
muscarinic receptor M$_3$-subtype - effect of lithium, 395
muscarinic receptors - binding of 4-diphenylacetoxy-N-methylpiperidine methobromide, 237

neuroimmune interactions - with cytokines, 435
neuroimmune modulation, 95
neuroimmunology, 96
neurone - GABA synthesis from astrocyte glutamine, 19
neuropeptide Y = NPY
NMDA receptors - interaction with theophylline, 69
NMR spectroscopy - used to show GABA synthesis from glutamine, 19
noradrenaline concentrations - at uptake sites, 493
noradrenaline release - formation of DHPG, 493

NPY - effect of antidepressants, 183
nucleotide sequence - of calretinin cDNA, 541

1-o-octadecyl-2-o-methoxy-glycero-3-phosphocholine (ET-18-OCH_3) activates c-fos and zif/268 mRNA, 567

Periplaneta americana - influence of γ-vinyl-GABA on neurotransmitters, 197
Periplaneta americana - influence of MPTP on neurotransmitters, 197
phosphatidylcholine - asymmetric distribution, 189
phosphatidylserine biosynthesis - effect of ethanol, 75
phosphatidylserine biosynthesis - influence of chlorpromazine, 75
phospholipase C - coupled M_3-muscarinic receptors, 395
phospholipids - of ethanolamine, 45
phospholipids - transfer of arachidonic acid, 135
phosphorylation of cytoskeletal proteins, 165
Planorbarius corneus - SCP_B stimulates adenylate cyclase, 479
platelet activating factor - induces increase inc-fos and zif/268 mRNA, 567
platelets - serotonin and calcium, 205
poly-phosphoinositide metabolism - age related changes in the brain, 11
poly-phosphoinositide metabolism - effect of ethanol, 11
prepro-NPY-mRNA - effect of antidepressants, 183
proenkephalins - posttranslateral processing, 315
propranolol - effect of β-adrenergic subtypes in development, 589
propranolol - effect on monoamine metabolism in development, 589
proteases - in chromaffin granule proteins, 361
protein kinase C II - binding of ^{3}H-staurosporin, 455
protein kinase C (PKC) - effect of ethanol, 575
protein kinase C - type II, 455
protein kinase C - inhibitors, 421
protein kinase C - activation, 417
proto-oncogene families, 369
proto-oncogenes - and signalling processes, 369
puromycin-sensitive aminopeptidase isoenzymes, 445
puromycin-sensitive aminopeptidase isoenzymes - homology with 14-3-3 protein, 445
putrescine - precursor for GABA synthesis, 249

receptor interactions, 213
receptor - of insulin, 3
receptors - imidazoline types, 153
receptors - of dopamine, 223
receptors - of metabotropic glutamate subtypes, 277
receptor-receptor interactions, 213
recombinant retrovirus - expression of choline acetyltransferase, 511
release - of cholecystokinin, 519
retina - GABA synthesis from putrescine, 249
retina - glutamate-induced release of GABA, 249
retina - serotonin binding proteins, 111
retinoblastoma (Y-79) cells - NAT activiy, 271
retrovirus-mediated gene transfer - to express choline acetyltransferase, 511
release - of cholecystokinin, 529

serotonergic system - interaction with cholecystokinin, 519
serotonin binding proteins - binding of serotonin and catecholamines, 111
serotonin binding proteins - in retina, 111
serotonin - influence of disulfiram, 31
serotonin - influences intracellular levels of calcium, 205
serotonin = 5-hydroxytryptamine
signal transduction pathways, 213
signal transduction processes - proto-oncogenes, 369
signal transduction - neuroimmune modulation, 95
small cardioactive peptide B (SCP_B) - effect on adenylate cyclase, 479
small cardioactive peptide B (SCP_B) - in Planorbarius corneus, 479
^{3}H-spermidine - binding, 37
^{3}H-staurosporin binding to PKC II, 455
substantia nigra - uptake of dopamine, 471
sulfation - of primate brain proteins, 465
synaptic plasma membranes - asymmetric distribution of phosphatidylcholine, 189

T cell receptor complex, 101
theophylline - interaction with NMDA receptors, 69
theophylline-induced noniceptive response, 69
thiobarbituric acid assay , 255
thyroxine-induced cardiac hypertrophy, 143
transduction pathways - in the CNS, 213
transport - of insulin, 2
transporter - of GABA, 263
triacylglycerols - transfer of arachidonic acid, 135
tryptophan - influence of disulfiram, 31
tumors -types of lactate dehydrogenase, 121

uptake - of uridine, 385
uptake sites - noradrenaline concentrations, 493
uridine uptake, 385

vasoactive intestinal peptide (VIP) - binding protein in pineal, 583
γ-vinyl-GABA - effect on neurotransmitters, 197
visual cortex - monoamine turnover, 531
visual structures - ethanolamine intermediates, 45
vitamin E - effect on choline acetyltransferase activity, 487

weaver mutant mouse - dendrite uptake of dopamine, 471

zif/268 mRNA - activated by PAF and ET-18-OCH_3, 567
zif/268 mRNA - induced in astroglial cells, 567
